Cardiac arrhythmias are a major cause of morbidity and mortality across the world. Learning the science behind the use of antiarrhythmic drugs is essential for all medical graduates. However, many antiarrhythmic drugs are available, and most of them have complex pharmacodynamic and pharmacokinetic profiles. We tried to improvise our teaching by conducting interactive, worksheet-based, small-group discussion on antiarrhythmic drugs with preclinical students of School of Medicine, Taylor's University, Malaysia. This survey was conducted to analyze the outcomes of worksheet-based, small-group discussion.
