#### Abstract

Advances in mobile phone technology have resulted in maximum usage of mobile phones worldwide.

Even in developing countries the mobile phones has gone from being an expensive item used by elite to

Even in developing countries the mobile phones has gone from being an expensive item used by elite to a personal communication tool for the general population. However, the impact of regular use of mobile phone has raised concern about the potential health hazards. In this paper, an attempt has been made to explore the major harms of cell phone usage at various stages of life and accordingly suggestions for the safe usage have been proposed to minimize their impact on human health.
